

Magento Extension for Product Video

Installation Instructions

You can choose any one of the method mentioned below.

Method – I

Step-1: Unzip the file and Copy all the folders and files without the PDF file

Step-2: Paste the copied files in the folder where Magento installed.

Step-3: Take **eXtra** care while copying the template files in to your Magento theme folder. If you haven't configured any theme just copy the template folder in to your base folder.

< TODO: Need to do copy the head.phtml file in to the template folder for baseUrl value in js file >

Step-4: Clear all your cache from admin side using below menu.

[System > Cache Management](#)

Method –II

Step-1: Copy the key from Magento Commerce site

Step-2: Go to your Admin panel and then select Magento backend from the below menu.

[System > MagentoConnect](#)

Step-3: Paste the key in Module installations and click Install

Step-4: Once done clear your cache from admin side using below menu

[System > Cache Management](#)

Configuring Video for Product

Once completed the above Installations, Follow the below steps for configuring video for your products.

Step-1: In the admin side go to your product catalog using the menu

[Catalog > Manage Products](#)

Step-2: Create a new “Downloadable Products” by selecting the same from the dropdown which provided while creating a new product.

- Step-3: After providing necessary details about the product, select “Downloadable Options” which available at the bottom of left side menu.
- Step-4: There are two sections available in the right side “Samples” and “Links”. Go to Sample section and click “Add Row” button.
- Step-5: Enter the title for the Video, which will get displayed in the video at the Product view page, then upload the video in the Files part.
- Step-6: Again click on the “Add Row” button and give the same title as you mentioned above and upload the poster image which will get displayed before the video played.
- Step-7: Also Step-6 is optional, if you don’t need to show any image before the video gets played you can skip that step.
- Step-8: Now go to the “Links” section and give ‘-‘ for the title and upload any dummy video in the file part, check the “Unlimited” checkbox for Max.Downloads and select “Use config” for Shareable.
- Step-9: **Please note Step-8 is Mandatory** else the product will be displayed as ”Out of Stock” at front-end. Don’t panic for doing this since the video cannot be downloaded at the front-end due to this.
- Step-10: Please upload video first then upload the image, **DONT interchange this** else the video wont get played in the Product View page. (i.e.) Give Sorting order as 1 for Video and 2 for Poster image.
- Step-11: That’s it after completing the above mentioned steps click on “Save” and come to front-end.
- Step-12: Go to the product view page of your newly created product and see your uploaded video get displayed above your product description.

If you got struck in any of the above mentioned steps or whether the video doesn’t get displayed in your product page feel free to write a mail to me @ workdesk4u@gmail.com
